SELF-DIAGNOSIS FUNCTION

The self-diagnosis function consists of error codes for customers which are displayed automatically when errors occur, and error codes which show the error history in the test mode during servicing. For details on how to view error codes for the customer, refer to the following box in the instruction manual. For details on how to check error codes during servicing, refer to the following "Procedure for using the Self-Diagnosis Function (Error History Display Mode)".

Self-Diagnosis Function

The deck's self-diagnosis function automatically checks the condition of the MD deck when an error occurs, then issues a three-digit code and an error message on the display. If the code and message alternate, find them in the following table and perform the indicated countermeasure. Should the problem persist, consult your nearest Sony dealer.

Three-digit code/Message	Cause/Remedy
C11/Protected	The inserted MD is record-protected. ➡ Take out the MD and close the record-protect slot (page 15).
C13/REC Error	The recording was not made properly. ➡ Set the deck in a stable surface, and repeat the recording procedure.
	The inserted MD is dirty (with smudges, fingerprints, etc.), scratched, or substandard in quality. ➡ Replace the disc and repeat the recording procedure.
C13/Disc Error	The deck could not read the TOC on the MD properly. ➡ Take out the MD and insert it again.
C14/Disc Error	The deck could not read the TOC on the MD properly. ➡ Insert another disc. ➡ If possible, erase all the tracks on the MD (page 30).
C71/Din Unlock	The sporadic appearance of this message is caused by the digital signal being recorded. This will not affect the recording.
	While recording from a digital component connected through the DIGITAL IN connector, the digital connecting cable was unplugged or the digital component turned off. ➡ Connect the cable or turn the digital component back on.

PROCEDURE FOR USING THE SELF-DIAGNOSIS FUNCTION (ERROR HISTORY DISPLAY MODE)

Note: Perform the self-diagnosis function in the "error history display mode" in the test mode. The following describes the least required procedure. Be careful not to enter other modes by mistake. If you set other modes accidentally, press the MENU/NO button to exit the mode.

1. While pressing the |◄◄ AMS ►►| knob and ■ button, connect the power plug to the outlet, and release the |◄◄ AMS ►►| knob and ■ button.
2. Turn the |◄◄ AMS ►►| knob and when "[Service]" is displayed, press the YES button.
3. Turn the |◄◄ AMS ►►| knob to display "ERR DP MODE".
4. Press the YES button to sets the error history mode and displays "total rec".
5. Select the contents to be displayed or executed using the |◄◄ AMS ►►| knob.
6. Press the |◄◄ AMS ►►| knob to display or execute the contents selected.
7. Press the |◄◄ AMS ►►| knob another time returns to step 4.
8. Press the MENU/NO button to display "ERROR DP MODE" and exits the error history mode.
9. To exit the test mode, press the REPEAT button. The unit sets into the STANDBY state, the disc is ejected, and the test mode ends.

Items of Error History Mode Items and Contents
Selecting the Test Mode

Display	Details of History
total rec	Displays the recording time. Displayed as "r□□□□□h". The displayed time is the total time the laser is set to the high power state. This is about 1/4 of the actual recording time. The time is displayed in decimal digits from 0h to 65535h.
total play	Displays the play time. Displayed as "p□□□□□h". The time displayed is the total actual play time. Pauses are not counted. The time is displayed in decimal digits from 0h to 65535h.
retry err	Displays the total number of retries during recording and number of retry errors during play. Displayed as "r□□ p□□". "r" indicates the retries during recording while "p" indicates the retry errors during play. The number of retries and retry errors are displayed in hexadecimal digits from 00 to FF.
total err	Displays the total number of errors. Displayed as "total □□". The number of errors is displayed in hexadecimal digits from 00 to FF.
err history	Displays the 10 latest errors. Displayed as "0□ E@@". □ indicates the history number. The smaller the number, the more recent is the error. (00 is the latest). @@ indicates the error code. Refer to the following table for the details. The error history can be switched by turning the ⏮ AMS ⏭ knob.
er refresh	Mode which erases the "retry err", "total err", and "err history" histories. When returning the unit to the customer after completing repairs, perform this to erase the past error history. After pressing the ⏮ AMS ⏭ button and "er refresh?" is displayed, press the YES button to erase the history. "Complete!" will be displayed momentarily. Be sure to check the following when this mode has been executed. • The data has been erased. • The mechanism operates normally when recording and play are performed.
tm refresh	Mode which erases the "total rec" and "total play" histories. These histories serve as approximate indications of when to replace the optical pickup. If the optical pickup has been replaced, perform this operation and erase the history. After pressing the ⏮ AMS ⏭ button and "tm refresh?" is displayed, press the YES button to erase the history. "Complete!" will be displayed momentarily. Be sure to check the following when this mode has been executed. • The data has been erased. • The mechanism operates normally when recording and play are performed.

SECTION 1
SERVICING NOTES

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety check before releasing the set to the customer:
Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage.
Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

Notes on chip component replacement

• Never reuse a disconnected chip component.
• Notice that the minus side of a tantalum capacitor may be damaged by heat.

JIG FOR CHECKING BD BOARD WAVEFORM

The special jig (J-2501-149-A) is useful for checking the waveform of the BD board. The names of terminals and the checking items to be performed are shown as follows.
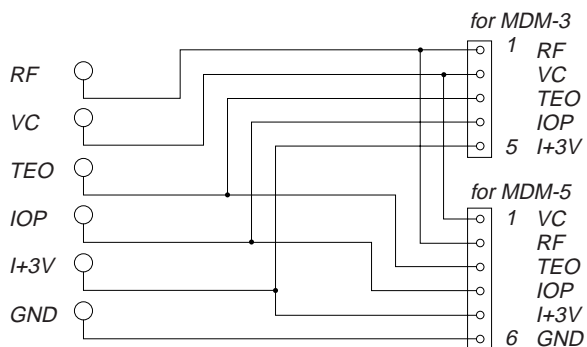

GND : Ground
I+3V : For measuring IOP (Check the deterioration of the optical pick-up laser)
IOP : For measuring IOP (Check the deterioration of the optical pick-up laser)
TEO : TRK error signal (Traverse adjustment)
VC   : Reference level for checking the signal

IOP DATA RECORDING AND DISPLAY WHEN OPTICAL PICK-UP AND NON-VOLATILE MEMORY (IC171 OF BD BOARD) ARE REPLACED

The IOP value labeled on the optical pick-up can be recorded in the non-volatile memory. By recording the value, it will eliminate the need to look at the value on the label of the optical pick-up. When replacing the optical pick-up or non-volatile memory (IC171 of BD board), record the IOP value on the optical pick-up according to the following procedure.

Record Precedure:
1. While pressing the [◄◄ AMS ►►] knob and [■] button, connect the power plug to the outlet, and release the [◄◄ AMS ►►] knob and [■] button.
2. Turn the [◄◄ AMS ►►] knob to display "[Service]", and press the [YES] button.
3. Turn the [◄◄ AMS ►►] knob to display "Iop Write" (C28), and press the [YES] button.
4. The display becomes "Ref=@@@.@" (@ is an arbitrary number) and the numbers which can be changed will blink.
5. Input the IOP value written on the optical pick-up.
   To select the number : Turn the [◄◄ AMS ►►] knob.
   To select the digit   : Press the [◄◄ AMS ►►] knob.
6. When the [YES] button is pressed, the display becomes "Measu=@@@.@" (@ is an arbitrary number).
7. As the adjustment results are recorded for the 6 value. Leave it as it is and press the [YES] button.
8. "Complete!" will be displayed momentarily. The value will be recorded in the non-volatile memory and the display will become "Iop Write".
9. Press the [REPEAT] button to complete.

Display Precedure:
1. While pressing the [◄◄ AMS ►►] knob and [■] button, connect the power plug to the outlet, and release the [◄◄ AMS ►►] knob and [■] button.
2. Turn th [◄◄ AMS ►►] knob to display "[Service]", and press the [YES] button.
3. Turn the [◄◄ AMS ►►] knob to display "Iop Read" (C27).
4. "@@.@/##.#" is displayed and the recorded contents are displayed.
   @@.@ : indicates the IOP value labeled on the optical pick-up.
   ##.#   : indicates the IOP value after adjustment
5. To end, press the [◄◄ AMS ►►] knod or [MENU/NO] button to display "Iop Read". Then press the [REPEAT] button.

CHECKS PRIOR TO PARTS REPLACEMENT AND ADJUSTMENTS

Before performing repairs, perform the following checks to determine the faulty locations up to a certain extent.
Details of the procedures are described in "5 Electrical Adjustments".

	Criteria for Determination (Unsatisfactory if specified value is not satisfied)	Measure if unsatisfactory:

Laser power check (6-2 : See page 23)	• 0.9 mW power
	  Specified value : 0.84 to 0.92 mW
	• 7.0 mW power
	  Specified value : 6.8 to 7.2 mW
		• Clean the optical pick-up
		• Adjust again
		• Replace the optical pick-up

	Iop (at 7mW) • Labeled on the optical pickup Iop value ± 10mA	• Replace the optical pick-up
Traverse check (6-3 : See page 23)	• Traverse waveform Specified value : Below 10% offset	• Replace the optical pick-up

Focus bias check (6-4 : See page 24)	• Error rate check
	  Specified value : For points a, b, and c
	  C1 error : About 200
	  AD error : Above 00
		• Replace the optical pick-up

C PLAY check (6-5 : See page 24)	• Error rate check
	  Specified value:
	  a. When using test disc (MDW-74/AU-1)

		If occasionally unsatisfactory: • Check if the overwrite head is distorted • Check the mechanism around the sled
Temperature compensation offset check (6-1 : See page 23)	• Unsatisfactory if displayed as T=@@ (##) [NG" NG (@@, ## are both arbitrary numbers)	• Check for disconnection of the circuits around D101 (BD board) • Check the signals around IC101, IC121, CN102, CN103 (BD board)

Note:

The criteria for determination above is intended merely to determine if satisfactory or not, and does not serve as the specified value for adjustments.
When performing adjustments, use the specified values for adjustments.

RETRY CAUSE DISPLAY MODE

- In this test mode, the causes for retry of the unit during recording can be displayed on the fluorescent indicator tube. During playback, the "track mode" for obtaining track information will be set.
  This is useful for locating the faulty part of the unit.
- The following will be displayed :
  During recording and stop : Retry cause, number of retries, and number of retry errors.
  During playback   : Information such as type of disc played, part played, copyright.
  These are displayed in hexadecimal.

Precedure:
1. Load a recordable disc whose contents can be erased into the unit.
2. Press the ⎡MENU/NO⎤ button. When "Edit Menu" is displayed on the fluorescent indicator tube, turn the ⎡◄◄ AMS ►►⎤ knob to display "All Erase?".
3. Press the ⎡YES⎤ button. (Or press the ⎡◄◄ AMS ►►⎤ knob)
4. When "All Erase??" is displayed on the fluorescent indicator tube, the music calendar number blinks.
5. Press the ⎡YES⎤ button to display "Complete!!", and press the ⎡■⎤ button immediately. Wait for about 15 seconds while pressing the button. (The ⎡◄◄ AMS ►►⎤ knob can be pressed instead of the ⎡YES⎤ button for the same results.)
6. When the "TOC" displayed on the fluorescent display tube goes off, release the ⎡■⎤ button.
7. Press the ⎡● REC⎤ button to start recording. Then press the ⎡❚❚⎤ button and start recording.
8. To check the "track mode", press the ⎡▷⎤ button to start play.
9. To exit the test mode, press the ⎡I/⏻⎤ button, and turn OFF the power. When "TOC" disappears, disconnect the power plug from the outlet.

Reading the Retry Cause Display

	Higher Bits				Lower Bits				Hexa-decimal	Cause of Retry	Occurring conditions
Hexadecimal	8	4	2	1	8	4	2	1			
Bit	b7	b6	b5	b4	b3	b2	b1	b0			
Binary	0	0	0	0	0	0	0	1	01	shock	When track jump (shock) is detected
	0	0	0	0	0	0	1	0	02	ader5	When ADER was counted more than five times continuously
	0	0	0	0	0	1	0	0	04	Discontinuous address	When ADIP address is not continuous
	0	0	0	0	1	0	0	0	08	DIN unlock	When DIN unlock is detected
	0	0	0	1	0	0	0	0	10	FCS incorrect	When not in focus
	0	0	1	0	0	0	0	0	20	IVR rec error	When ABCD signal level exceeds the specified range
	0	1	0	0	0	0	0	0	40	CLV unlock	When CLV is unlocked
	1	0	0	0	0	0	0	0	80	Access fault	When access operation is not performed normally

Reading the Display:
Convert the hexadecimal display into binary display. If more than two causes, they will be added.

Example
When 42 is displayed:
Higher bit : 4 = 0100 → b6
Lower bit : 2 = 0010 → b1
In this case, the retry cause is combined of "CLV unlock" and "ader5".

When A2 is displayed:
Higher bit : A = 1010 → b7+b5
Lower bit : 2 = 0010 → b1
The retry cause in this case is combined of "access fault", "IVR rec error", and "ader5".

Reading the Retry Cause Display

Hexadecimal	Higher Bits				Lower Bits				Hexa-decimal	Details	
	8	4	2	1	8	4	2	1			
Bit	b7	b6	b5	b4	b3	b2	b1	b0		When 0	When 1
Binary	0	0	0	0	0	0	0	1	01	Emphasis OFF	Emphasis ON
	0	0	0	0	0	0	1	0	02	Monaural	Stereo
	0	0	0	0	0	1	0	0	04	This is 2-bit display. Normally 01.	
	0	0	0	0	1	0	0	0	08	01:Normal audio. Others:Invalid	
	0	0	0	1	0	0	0	0	10	Audio (Normal)	Invalid
	0	0	1	0	0	0	0	0	20	Original	Digital copy
	0	1	0	0	0	0	0	0	40	Copyright	No copyright
	1	0	0	0	0	0	0	0	80	Write prohibited	Write allowed

Reading the Display:
Convert the hexadecimal display into binary display. If more than two causes, they will be added.

Example When 84 is displayed:
    Higher bit: 8 = 1000 → b7
    Lower bit : 4 = 0100 → b2
    In this case, as b2 and b7 are 1 and others are 0, it can be determined that the retry cause is combined of "emphasis OFF", "monaural", "original", "copyright exists", and "write allowed".

Example When 07 is displayed:
    Higher bit: 0 = 1000 → All 0
    Lower bit : 7 = 0111 → b0+b1+b2
    In this case, as b0, b1, and b2 are 1 and others are 0, it can be determined that the retry cause is combined of "emphasis ON", "stereo", "original", "copyright exists", and "write prohibited".

TEST MODE

1. PRECAUTIONS FOR USE OF TEST MODE

- As loading related operations will be performed regardless of the test mode operations being performed, be sure to check that the disc is stopped before setting and removing it.

  Even if the △ EJECT button is pressed while the disc is rotating during continuous playback, continuous recording, etc., the disc will not stop rotating.

  Therefore, it will be ejected while rotating.

  Be sure to press the △ EJECT button after pressing the MENU/NO button and the rotation of disc is stopped.

1-1. Recording laser emission mode and operating buttons

- Continuous recording mode (CREC MODE)
- Laser power check mode (LDPWR CHECK)
- Laser power adjustment mode (LDPWR ADJUST)
- Traverse (MO) check (EF MO CHECK)
- Traverse (MO) adjustment (EF MO ADJUST)
- When pressing the ● REC button.

2. SETTING THE TEST MODE

The following are two methods of entering the test mode.

Procedure 1: While pressing the |◀◀ AMS ▶▶| knob and ■ button, connect the power plug to an outlet, and release the |◀◀ AMS ▶▶| knob and ■ button.

When the test mode is set, "[Check]" will be displayed. Turn the |◀◀ AMS ▶▶| knob switches between the following four groups; ···◀──▶ [Check] ◀──▶ [Adjust] ◀──▶ [Service] ◀──▶ [Develop] ◀──▶ ···.

Procedure 2: While pressing the |◀◀ AMS ▶▶| knob, connect the power plug to the outlet and release the |◀◀ AMS ▶▶| knob.

When the test mode is set, "TEMP CHECK" will be displayed. By setting the test mode using this method, only the "Check" group of method 1 can be executed.

3. EXITING THE TEST MODE

Press the REPEAT button. The disc is ejected when loaded, and "Standby" display blinks, and the STANDBY state is set.

4. BASIC OPERATIONS OF THE TEST MODE

All operations are performed using the |◀◀ AMS ▶▶| knob, YES button, and MENU/NO button.

The functions of these buttons are as follows.

Function name	Function
|◀◀ AMS ▶▶| knob	Changes parameters and modes
YES button	Proceeds onto the next step. Finalizes input.
MENU/NO button	Returns to previous step. Stops operations.

5. SELECTING THE TEST MODE

There are 31 types of test modes as shown below. The groups can be switched by turn the $\boxed{\blacktriangleleft\blacktriangleleft \text{ AMS } \blacktriangleright\blacktriangleright\text{I}}$ knob. After selecting the group to be used, press the $\boxed{\text{YES}}$ button. After setting a certain group, turn the $\boxed{\blacktriangleleft\blacktriangleleft \text{ AMS } \blacktriangleright\blacktriangleright\text{I}}$ knob switches between these modes. Refer to "Group" in the table for details selected.

All items used for servicing can be treated using group S. So be carefully not to enter other groups by mistake.

2. PRECAUTIONS FOR CHECKING LASER DIODE EMISSION

To check the emission of the laser diode during adjustments, never view directly from the top as this may lose your eye-sight.

3. PRECAUTIONS FOR USE OF OPTICAL PICK-UP (KMS-260A)

As the laser diode in the optical pick-up is easily damaged by static electricity, solder the laser tap of the flexible board when using it. Before disconnecting the connector, desolder first. Before connecting the connector, be careful not to remove the solder. Also take adequate measures to prevent damage by static electricity. Handle the flexible board with care as it breaks easily.

4. PRECAUTIONS FOR ADJUSTMENTS

1. When replacing the following parts, perform the adjustments and checks with **O** in the order shown in the following table.

	Optical Pick-up	BD Board			
		IC171	D101	IC101, IC121	IC192
1. Initial setting of adjustment value	O	O	×	O	×
2. Recording of IOP information (Value written in the pick-up)	O	O	×	×	×
3. Temperature compensation offset adjustment	×	O	O	×	×
4. Laser power adjustment	O	O	×	O	O
5. Traverse adjustment	O	O	×	O	×
6. Focus bias adjustment	O	O	×	O	×
7. Error rate check	O	O	×	O	×
8. Auto gain output level adjustment	O	O	×	O	×

2. Set the test mode when performing adjustments.
   After completing the adjustments, exit the test mode.
   Perform the adjustments and checks in "group S" of the test mode.
3. Perform the adjustments to be needed in the order shown.

4. Use the following tools and measuring devices.
   - Check Disc (MD) TDYS-1
     (Parts No. 4-963-646-01)
   - TEST DISK (MDW-74/AU-1) (Parts No. 8-892-341-41)
   - Laser power meter LPM-8001 (Parts No. J-2501-046-A) or MD Laser power meter 8010S (Parts No. J-2501-145-A)
   - Oscilloscope (Measure after performing CAL of prove)
   - Digital voltmeter
   - Thermometer
   - Jig for checking BD board waveform
     (Parts No. : J-2501-149-A)
5. When observing several signals on the oscilloscope, etc., make sure that VC and ground do not connect inside the oscilloscope.
   (VC and ground will become short-circuited)
6. Using the above jig enables the waveform to be checked without the need to solder.
   (Refer to Servicing Notes on page 6)
7. As the disc used will affect the adjustment results, make sure that no dusts nor fingerprints are attached to it.

Laser power meter

When performing laser power checks and adjustment (electrical adjustment), use of the new MD laser power meter 8010S (J-2501-145-A) instead of the conventional laser power meter is convenient.

It sharply reduces the time and trouble to set the laser power meter sensor onto the objective lens of the pick-up.

5. CREATING CONTINUOUSLY-RECORDED DISC

* This disc is used in focus bias adjustment and error rate check. The following describes how to create a continuous recording disc.

1. Insert a disc (blank disc) commercially available.
2. Turn the |◄◄ AMS ►►| knob and display "CREC MODE". (C31)
3. Press the [YES] button again to display "CREC MID".
   Display "CREC (0300)" and start to recording.
4. Complete recording within 5 minutes.
5. Press the [MENU/NO] button and stop recording .
6. Press the [⏏ EJECT] button and remove the disc.

The above has been how to create a continuous recorded data for the focus bias adjustment and error rate check.
Note :
- Be careful not to apply vibration during continuous-recording.

6. CHECK PRIOR TO REPAIRS

These checks are performed before replacing parts according to "approximate specifications" to determine the faulty locations. For details, refer to "Checks Prior to Parts Replacement and Adjustments" (See page 8).

6-1. Temperature Compensation Offset Check

When performing adjustments, set the internal temperature and room temperature of 22 °C to 28 °C.

Checking Procedure:
1. Turn the [I◀◀ AMS ▶▶I] knob to display "TEMP CHECK" (C01).
2. Press the [YES] button.
3. "T=@@(##) [OK] should be displayed. If "T=@@ (##) [NG]" is displayed, it means that the results are bad.
   (@@ indicates the current value set, and ## indicates the value written in the non-volatile memory)

6-2. Laser Power Check

Before checking, check the IOP value of the optical pick-up.
(Refer to 5-8. Recording and Displaying IOP Information)
Connection :

Checking Procedure:
1. Set the laser power meter on the objective lens of the optical pick-up. (When it cannot be set properly, press the [◀◀] button or [▶▶] button to move the optical pick-up)
   Connect the digital volt meter to CN110 pin ⑤ (I+3V) and CN110 pin ④ (IOP).
2. Then, turn the [I◀◀ AMS ▶▶I] knob and display "LDPWR CHECK" (C02).
3. Press the [YES] button once and display "LD 0.9 mW $ ▦". Check that the reading of the laser power meter become 0.84 to 0.92 mW.
4. Press the [YES] button once more and display "LD 7.0 mW $ ▦". Check that the reading the laser power meter and digital volt meter satisfy the specified value.

Specification:
Laser power meter reading : 7.0 ± 0.2 mW
Digital voltmeter reading : Optical pick-up displayed value ±10%

(Optical pick-up label)

KMS260A
27X40

IOP=82.5 mA in this case
IOP (mA) = Digital voltmeter reading (mV)/1 (Ω)

5. Press the [MENU/NO] button and display "LDPWR CHECK" and stop the laser emission.
   (The [MENU/NO] button is effective at all times to stop the laser emission)

Note 1: After step 4, each time the [YES] button is pressed, the display will be switched between "LD 0.7 mW $ ▦", "LD 6.2 mW $ ▦", and "LD Wp ホセイ $ ▦". Nothing needs to be performed here.

6-3. Traverse Check

Note 1: Data will be erased during MO reading if a recorded disc is used in this adjustment.
Note 2: If the traverse waveform is not clear, connect the oscilloscope as shown in the following figure so that it can be seen more clearly.
Connection :
Checking Procedure:
1. Connect an oscilloscope to CN110 pin ③ (TEO) and CN110 pin ① (VC) of the BD board.
2. Load a disc (any available on the market). (Refer to Note 1)
